# YTRON-Y VIRON

#### The YTRON-Y Principle

**YTRON-Y** creates a pure axial jet stream. It rapidly and homogeneously mixes, without aeration, liquids and viscous products.

Vortex formation, normally associated with conventional agitators, is eliminated.

## Disadvantages of Conventional Agitators

## Advantages of YTRON-Y Jet Mixing Turbine

	<b>5</b> - 1 - 1 - 1 - 1 - 1 - 1 - 1 - 1 - 1 -
Radial flow pattern (rotational flow)	Axial flow pattern
Non-uniform and incomplete mixing	Homogenous mixing
Vortex formation, strong aeration, (Result: Oxidation, change of colour, problems with the heat transfer etc.)	No air entrainment
Sedimentation	No sedimentation
Floating	No floating of product on the surface
Incomplete mixing of the vessel contents	Rapid mixing of entire container contents
Dead zones around the area of the baffles	No baffles / flow deflectors required flow deflectors are integrated in stator
Local shear forces, long process times	Low shear due to short residence time in the YTRON-Y mixing head. Rotor in contact with the flowing product only. Rapid process time.
Side entry: Product contacts the seal directly	Side entry: Air cushion prevents product from contacting the mechanical seal surfaces at the top of the shaft.

#### Advantages of YTRON - Y Jet Mixing Turbine

- The YTRON-Y mixing head creates a directed jet stream, without rotation, into the body of the product, without creating a vortex
- The rotor-stator principle, in combination with the integrated flow deflectors, prevents any rotational stream being formed
- The robust construction means that it does not require bearings or seals in the immersed part and therefore involves no hygienic risk
- The sealing of the shaft is selected according to the requirements. A radial seal ring, single or double acting mechanical seal (-1 to 10 bar) or an aseptic mechanical seal, flushed with condensate, are available
- Drive motor from 0,25 to 55 kW are available in the standard motor program
- The modular system allows the choice of the best mixing technology for each individual application

# Conventional agitator

with shaft turning freely, without stator and stator tube.

At start-up, the solids are initially lifted from the bottom of the container.

YTRON-Y
Jet Mixing Turbine
with integrated
flow deflectors.

Instantly after the starting the YTRON Y, the solids are lifted off the bottom of the container by the jet stream directed towards the bottom of the container.

The predominantly radial forces are unable to keep the solids in suspension. Within a short time, the first vortex reaches the rotor blade.

2

The solid particles are homogeneously suspended in full within seconds, with no sedimentation and without air entrainment.

3

The stator, with integrated flow deflectors, creates a long, directed jet stream, without rotation, to the bottom of the container.

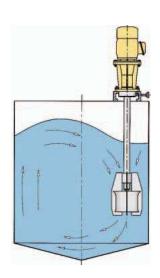

The jet stream ensures that the product is completely homogenous.

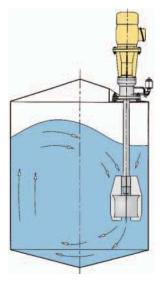

The radial flow causes the components to separate. Because of this design, homogenous mixing without air entrainment is impossible.

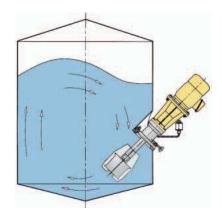

#### YTRON-Y Installation Possibilities

Vertical installation in an open vessel. CIP option available

Vertical installation in a closed vessel Design with tank flange. CIP and SIP options available

Side-entry in closed vessel.
Design with tank flange.
CIP and SIP option available

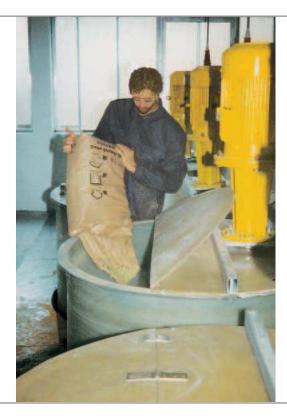

The vertical installation into a mixing vessel is normally positioned off-centre. This ensures liquids are mixed within seconds without air entrainment.

A side entry installation below the liquid level makes the YTRON-Y suitable for vertical cylindrical tanks with more than 10 metres height. Even in this case an additional bearing in the immersed section is not required.

Apart from the standard types of installation shown above, the YTRON-Y is also available as a portable unit. For example:

Laboratory model with a desk top stand, a production unit on mobile hoist or an installation with a static hoist.

YTRON -Y installed on mating Flange of an Open Container Application: Suspension of Abrasive Polish

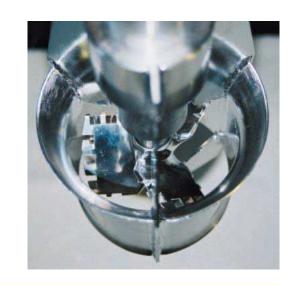

YTRON -Y in Side Entry Tank-flange execution below Liquid Level Application: Fermented Milk for Fromage Frais Production (100.000 litres capacity)

\_

#### The YTRON-Y HS Principle

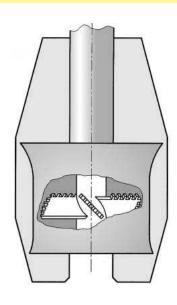

With the HS rotor, products are sheared in a defined way in a batch. The effect is comparable to one of a conventional high shear unit with the added advantages of YTRON-Y directed jet.

#### Important advantages of YTRON-Y HS

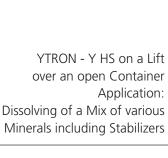

- Construction without bearings or seals in the product area
- Pure axial flow jet stream
- No sedimentation, no vortexing
- Homogenous mixing
- Uniform flow pattern over the entire surface of the container
- Shaft protected by the stator tube, the rotor covered by the stator. This means the operator is not exposed to rotating parts

One important point: The HS-rotor is available as a spare part for existing YTRON-Y units. Please let us have your machine number to receive a quote.

YTRON -Y HS in Tank-flange Construction Application: Suspending of Thickener Compounds

According to the application, special construction deviating from standard are available.

YTRON-Y in the Pharmaceutical Industry Application: Tablet Coating Solutions

#### The YTRON® range is not mass produced

YTRON® equipment and systems are carefully selected for your individual application. We therefore kindly ask you to provide as detailed as possible a description of your application containing for example:

- Components to be processed
- Viscosity at the beginning and at the end of the process
- The specific gravity (bulk density when adding powders)
- Overall dimensions and shape of the mixing vessel
- Minimum and maximum filling levels of products to be processed
- Working temperature
- Other details that may be relevant

The capacities indicated in this brochure are related to certain applications under standardised conditions. They are not necessarily valid for all products or processes.

The standard materials for the product contact parts are:

- Material 1.4301 / AISI 304
- Material 1.4571 / AISI 316 Ti
- Material 1.4435 und 1.4404 / AISI316 L

Special materials such as 1.4539, Hastelloy etc. are available on request

Fittings can be delivered various types such as DIN 11851, DIN 11864, SMS, DS, RJT, Clamp, Flange etc.

We reserve the right to alter the design without previous notice in the interest of development.
