

Innovative vacuum for automation

Schmalz X-Pump – SXP / SXMP
Vacuum compact ejectors for automation solutions

Schmalz X-Pump – SXP / SXMP

The future of vacuum generation!

Schmalz X-Pump in use on a press line

Single SXMP ejector plate

Two SXP on one block

Schmalz X-Pump: the new generation of vacuum compact ejectors for automation applications.

The innovative X-Pump is designed, developed and built for the special tasks and requirements which exist in the automotive sector – assembly and press shops – and for use in automated vacuum systems in the sheet-metal and plastics industries and many other industrial sectors.

X-Pump – innovations for your success!

...eXtra strong!

- extremely high suction capacity and powerful blow-off pulse
- safe and economical operation
- maximum availability

...eXtra robust!

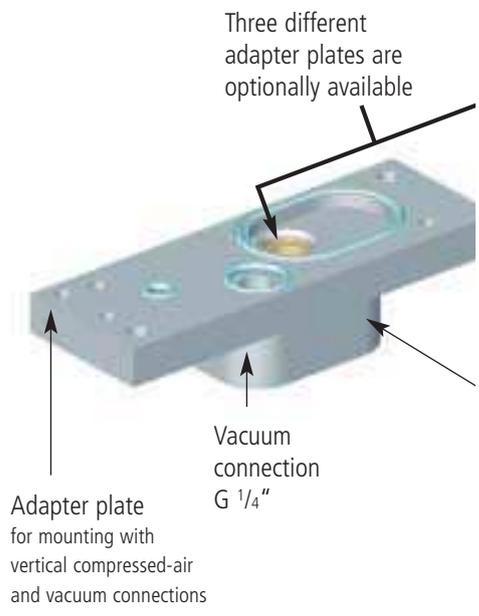

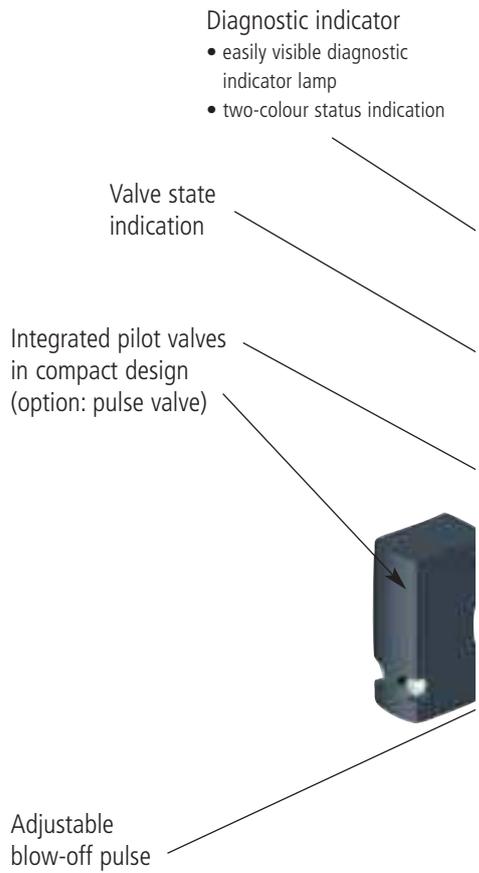

- compact design and simple connection facilities
- resistance to faults
- degree of protection IP65

...eXtra intelligent!

- condition monitoring
- integrated diagnostic functions
- intelligent detection of and compensation for leaks and other faults

Schmalz X-Pump ...

Construction, functions and p

eXtra strong! ...eXtra robust! ...eXtra intelligent!

performance of the new X-Pump*

Condition Monitoring

- control module with versatile diagnostic functions
- intelligent and timely detection of faults for maximum process safety

Controls and indicators

- very easy to operate
- large, easy-to-use keypad
- easily legible display

Electrical connections

- M12 (8-pole) or 2xM12 (5-pole), (optionally with potential isolation)
- option: direct connection to all common bus systems

Silencer:

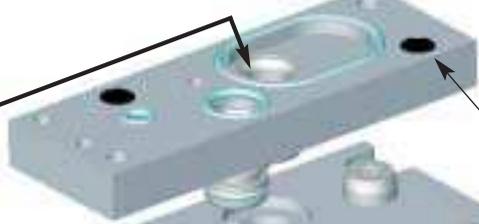

- simple quick-change facility
- reduced noise level (63-72 db (A))
- open system, unaffected by dirt

Option: Power module (SXMP version)

- maximum blow-off power
- very short cycle times

Adapter plate for rapid mounting on the base plate

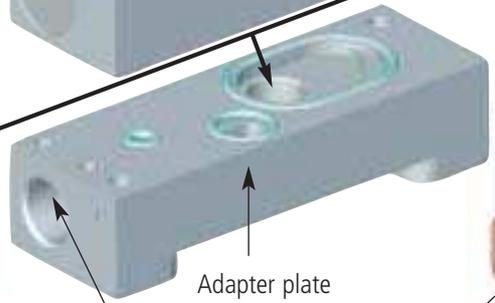

Compressed-air connection G 3/8"

- only one connection for one or more ejectors

Adapter plate for mounting with horizontal compressed-air and vacuum connections

Compact design

- no protruding edges
- extreme robustness

Vacuum connection G 3/8"

Base plate with quick-change system

- safe and fast connection of ejector blocks
- can accommodate multiple ejectors
- including safety interlock when compressed air is connected

* Patent pending

Schmalz X-Pump ... eXtra strong!

The Schmalz X-Pump offers many possibilities...

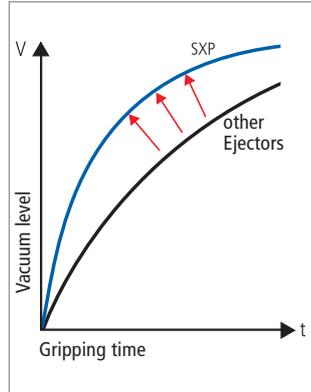

Quick changing of SXP pumps on a dual block

During the development of the X-Pump, emphasis was placed on high performance coupled with good flexibility.

SXP: short cycle times

SXP: considerably faster

| Our highlights | Your benefits |
|--|---|
| <ul style="list-style-type: none"> • High suction capacity and powerful blow-off pulse thanks to optimised nozzles and the power module | <ul style="list-style-type: none"> > Rapid evacuation and a powerful blow-off pulse permit very short cycle times |
| <ul style="list-style-type: none"> • Integrated automatic air saving function | <ul style="list-style-type: none"> > Economical operation even in continuous use |
| <ul style="list-style-type: none"> • Flexible modular system | <ul style="list-style-type: none"> > Optimum adaptation to specific tasks |
| <ul style="list-style-type: none"> • Wide power range | <ul style="list-style-type: none"> > Optimum power ratings for all applications, resulting in cost savings |
| <ul style="list-style-type: none"> • Very simple construction of multiple-ejector blocks | <ul style="list-style-type: none"> > Blocks of two to six ejectors can be constructed with standard components |
| <ul style="list-style-type: none"> • Quick-change system | <ul style="list-style-type: none"> > Quick changing of ejectors for evaluation purposes |
| <ul style="list-style-type: none"> • Clever mounting and connection facilities | <ul style="list-style-type: none"> > Simple mounting on all types of industrial robots and handling units |
| <ul style="list-style-type: none"> • Option: direct bus connection | <ul style="list-style-type: none"> > No need for I/O ports and external components – reduced costs |

Schmalz X-Pump ... eXtra robust!

The X-Pump is designed specially for use on very rough operating environments.

The X-Pump withstands even difficult ambient conditions

During the manufacture of sheet-metal parts, particularly in press shops, vacuum generators are exposed to extreme stresses. The X-Pump withstands these dirty (oily and dusty) surroundings and is equally resistant to strong mechanical forces (high positive and negative acceleration values).

| Our highlights | Your benefits |
|---|---|
| <ul style="list-style-type: none"> • Compact design | <ul style="list-style-type: none"> > No projecting parts or edges |
| <ul style="list-style-type: none"> • Extremely resistant to wear thanks to a friction-free piston system | <ul style="list-style-type: none"> > High availability and very low maintenance costs |
| <ul style="list-style-type: none"> • Extreme resistance to dirt | <ul style="list-style-type: none"> > Maximum process safety |
| <ul style="list-style-type: none"> • Needs no filter | <ul style="list-style-type: none"> > Maintenance-free operation |

Schmalz X-Pump ... eXtra intelligent!

NEW: **Condition Monitoring** – fault detection before the system shuts down!

Many diagnostic functions are integrated as standard features into the new Schmalz X-Pump to permit preventive maintenance. Parameters such as the evacuation time and the limit values for the generated vacuum are permanently monitored.

The intelligent vacuum generator detects faults, evaluates them and generates the appropriate signals. The X-Pump also immediately initiates any necessary countermeasures.

If, for example, the defined leakage rate is exceeded, the automatic air-saving function is immediately deactivated and the X-Pump generates full power.

Condition Monitoring – timely detection of faults

Our highlights

Your benefits

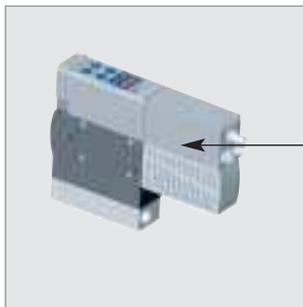

- Optical status indication with an easily visible indicator lamp (various states: OK/warning/fault)
 - > Permanent and continuous monitoring of the complete vacuum system
 - > In the case of a leak (due to a worn suction pad or a faulty hose), the fault indicator remains active even when the system is switched off in order to permit fast fault-finding.
- Integrated counter module
 - > Counting of production cycles (e.g. per shift or day)
- Diagnostic output for external monitoring
 - > Permits fault detection by an external controller
- Time-based monitoring of the vacuum curve and the regulation rate
 - > For identification of defective vacuum spiders

The advantages of the X-Pump:

- Lower operating costs due to reduced maintenance and preventive maintenance
- Increased process safety thanks to the automatic detection of and compensation for faults
- Simple setup procedure saves time
- The X-Pump combines high intelligence with ease of use

Intelligent connection facilities:

The signals generated by the versatile diagnostic functions of the X-Pump can be transmitted via a M12 plug connector or a direct bus connection (suitable for all common protocols) to an external controller for evaluation.

Bus interface optional

Ejector SXMP with bus module

Schmalz X-Pump ... eXtra intelligent!

Simple operation and versatile diagnostic facilities...

The key pad, the 3-digit display, 4 additional LEDs and the diagnostic indicator make adjustment and use of the ejector very simple.

Diagnostic indicator

The easily visible diagnostic indicator permits rapid and unambiguous recognition of the status of the vacuum system.

Steady green light: vacuum system is free of leaks

Blinking green light: the vacuum system has a small leak, but can still be used.

Blinking red light: the vacuum is generated too slowly or the desired value is not reached. There are leaks in the vacuum system and it should not be used until these have been repaired.

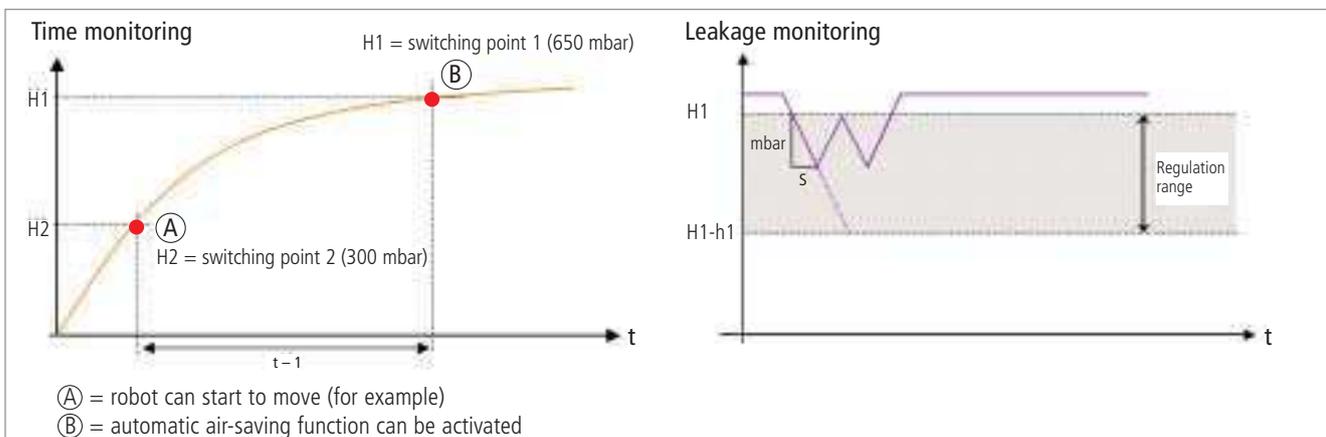

Steady red light: vacuum too low or non-existent. The vacuum system must be checked and repaired immediately.

- ① Display
- ② LEDs
- ③ MENU key
- ④ ENTER key
- ⑤ UP key
- ⑥ DOWN key
- ⑦ Diagnostic indicator

Two examples: Condition Monitoring

Monitoring of the evacuation time (see the diagram below). The evacuation time between the switching points H2 and H1 is measured when the vacuum is generated for the first time. If the time for this is greater than $t - 1$, the diagnostic indicator blinks with a red light and a diagnostic signal is generated at the connector. This monitoring function is permanently active!

Monitoring the system for leaks (see diagram). After the switching point H1 has been reached, the automatic air-saving function is activated and the system monitors the leakage from the gripper. If a preset leakage rate is exceeded, the automatic air-saving function is (if necessary) deactivated and the diagnostic indicator lights to signal the fault. The diagnostic output is also activated.

Vacuum components and gripping systems

For a large range of users in many different branches of trade and industry – from the automotive to the pharmaceutical industries – Schmalz offers reliable support and assistance in the solution of automation and handling tasks – either as individual components or complex vacuum gripping systems.

Our teams are at your service!

Vacuum components

Tel. +49 (0)7443 2403 201

Fax +49 (0)7443 2403 299

Vacuum gripping systems

Tel. +49 (0)7443 2403 103

Fax +49 (0)7443 2403 197

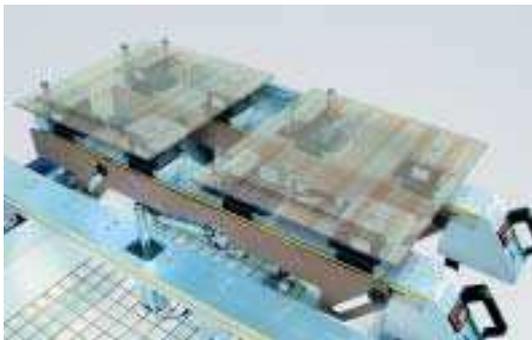

Vacuum handling systems

Ergonomical solutions for many types of applications. Vacuum lifting devices VacuMaster and vacuum tube lifters Jumbo for easy handling of effortless, damage-free workpiece handling. Workshop equipment as practical aids in trade and industry.

Our "Vacuum handling systems" team is at your service!

Tel. +49 (0)7443 2403 301

Fax +49 (0)7443 2403 399

Vacuum clamping systems

Future-oriented vacuum clamping technology from Schmalz is the intelligent answer to the continually increasing demands for more productivity and the economical use of CNC machine tools.

Our "Vacuum clamping systems" team is at your service!
